CONSERVATORIES & ORANGERIES /

DESIGNING AND MANUFACTURING QUALITY HARDWOOD AND uPVC CONSERVATORIES, DOORS, WINDOWS AND GLASS BALUSTRADES IN CORNWALL SINCE 1985

At Philip Whear Windows and Conservatories, we pride ourselves on quality design and craftsmanship, creating unique, bespoke designs that really enhance your home.

We have over 35 years of experience of designing and manufacturing and have a reputation for quality products, excellent workmanship as well as genuine after sales service.

We look forward to working with you!

The Philip Whear Team

We can create a design for you to complement a traditional property, contemporary home and everything in between, using a wide range of components, materials and colours.

BESPOKE DESIGNS

Adding a conservatory to your home will enhance your lifestyle by allowing you to enjoy all the benefits of the outdoors with all the comfort of indoors. By increasing your living space and the amount of natural light coming into your home, conservatories add not only to the appearance of your home, but to its value too.

Conservatories range from the simple and functional, to amazing home transforming living spaces. Whether you have a traditional property or a more contemporary home, from our factory and showroom in Cornwall, we can create the perfect conservatory to complement your property.

ORANGERIES

An increasingly popular design, an orangery style conservatory generally features an atrium type roof set into a solid framework with pilasters and less glazing than a traditional conservatory.

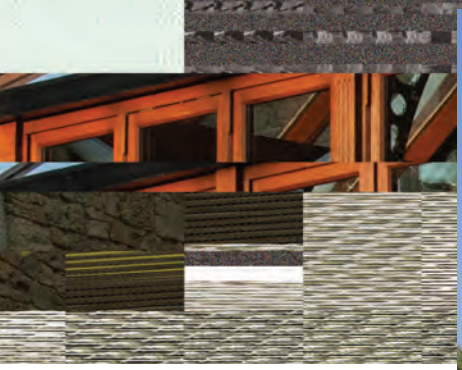

The pilasters and solid framework can lend a more substantial room-like feel to the space. We can work with you to achieve your aspirations, to design a structure to both compliment your property and provide you with a transformational living space to enjoy for years to come.

CONTEMPORARY / TRADITIONAL

We create designs that complement both traditional or more contemporary properties and use a wide variety of materials and components to achieve your design. We manufacture our conservatories in both hardwood and uPVC and can paint in any colour you choose.

GABLE END CONSERVATORIES

Gables are an elegant and stylish type of conservatory. A great choice for properties with gable ends, and also very in keeping with many period homes.

We sometimes incorporate a variation on the typical gable end, by making full height glass panels without any horizontal interruptions, giving a very sleek vertical look.

LEAN-TO CONSERVATORIES

A lean-to roof is a single pitch roof which will normally adjoin a flat surface. The pitch can vary enormously and is most often determined by the wall height available. The lean-to can be designed in a wide range of sizes to suit most properties.

Many original Victorian conservatories and plant houses, were 'lean-to's' and were often quite decorative and attractive. In the mid to late 20th Century near flat roofed versions, usually with a plastic roof sheeting material became widely available and popular, causing something of a decline in their reputation.

Today however, with the development of better materials and design over the last few decades, the lean to has rapidly become as popular as it first was. The lean-to is an inexpensive way to gain additional living space. You can choose from a variety of materials and finishes to suit your project.

You can choose from a variety of materials and finishes to suit your project.

HIPPED ROOF CONSERVATORIES

Hipped roofed conservatories come in a wide range of shapes and sizes. These will always look good on hipped roofed properties including bungalows.

We use the highest quality components. Hinges, locks and door furniture will be made of stainless steel or non-ferrous metal wherever possible.

TECHINCAL / PRODUCT SPECIFICATION

Hardware

Our hinged doors are fitted with 'flag hinges' which are extremely secure. On a uPVC conservatory they are attached to both the uPVC profile and the aluminium box section reinforcement with stainless steel screws. They also offer wide adjustment. The locking mechanism is a multi-point stainless steel and brass product with top and bottom shootbolts, two opposed hook locks, two rollers and a mortice.

In the casement sashes we use stainless steel screws and friction stays (hinges). By fully reinforcing the profiles these screws thread into both the extrusions and aluminium sections producing unequalled security in resisting forced entry.

Our window locking mechanisms are also stainless steel and feature shootbolt and mortice 3-way locking with a secure 'night vent' position. The handles are auto-locking with push button release and a key lock, the best option for security.

Paint any Colour

We can paint in any colour which is a great way make your product really unique. If you've chosen a painted finish, our expert paint technician will spray and lacquer your components in our spray booth and dust-extracted oven.

Insurance backed guarantee

Soon after your conservatory build is complete, we'll make an appointment to visit for quality checks and to talk you through operation and maintenance so that you'll have many years of enjoyment from your new space. We will issue you with a guarantee which means, should anything go wrong, our service engineers are on hand to help resolve any issues.

Where possible our waste materials are recycled including uPVC, aluminium, glass and timber. We only use sustainably sourced FSC or PEFC certified timber.

ENVIRONMENTAL

Old doors, windows and conservatories are the cause of a significant proportion of wasted energy in homes across the UK.

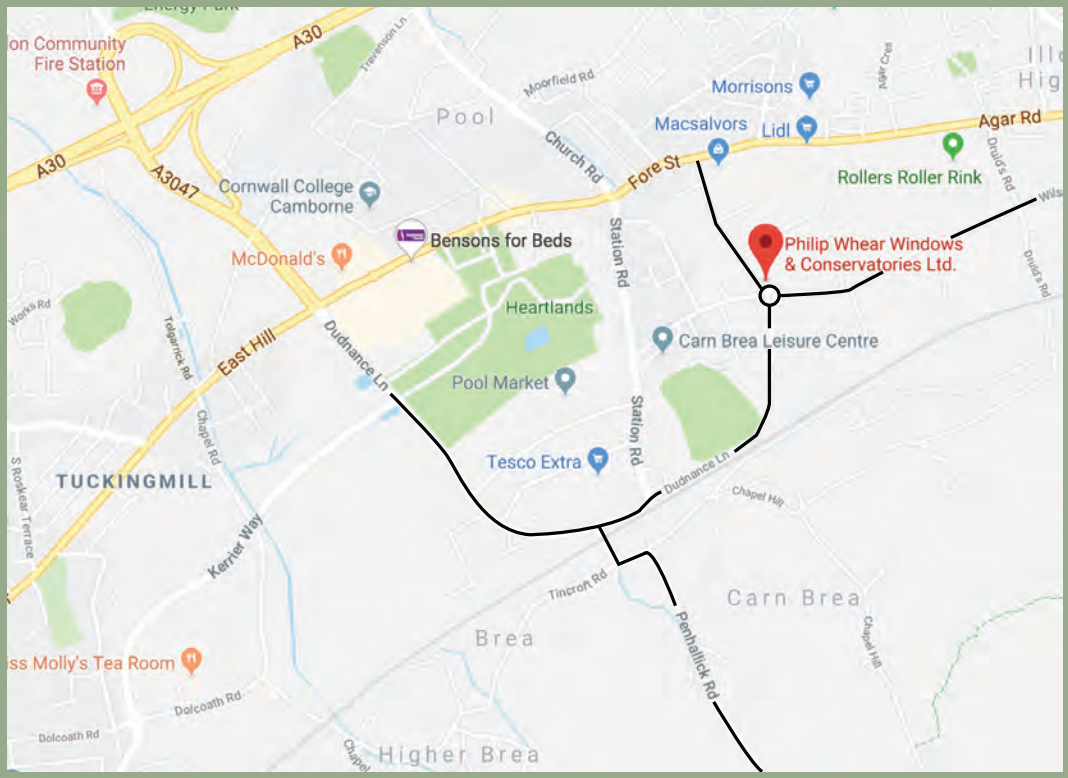

People are becoming increasingly concious of not only the costs of wasting energy, but also the impact on the environment. Energy efficient doors, windows and conservatories are an investment that will save you in the long run.

WHAT ARE THE BENEFITS?

- Reduced energy consumption and therefore lower bills.
- A smaller carbon footprint.
- A more comfortable home (Fewer draughts and cold spots).
- Peace and quiet.
- Reduced condensation.
