DESIGNING AND MANUFACTURING QUALITY CONSERVATORIES, DOORS, WINDOWS AND GLASS BALUSTRADES IN CORNWALL SINCE 1985

At Philip Whear Windows and Conservatories we pride ourselves on quality design and craftsmanship, creating unique, bespoke designs that really enhance your home. We have over 40 years of experience in designing and manufacturing and have built a reputation for quality products, excellent workmanship as well as genuine after sales service.

We look forward to working with you!

The Philip Whear Team

We can manufacture windows and doors to complement traditional properties, contemporary homes and everything in between using a wide range of styles, materials and colours.

UPVC WINDOWS

We use a thermally efficient, high quality uPVC profile to construct our windows, guaranteeing strength and colour stability. We fully reinforce all of our frames, to enhance the structural integrity and provide secure anchoring for fittings.

TIMBER WINDOWS

Our top quality, sustainably sourced, hardwood timber windows and doors are made here in Cornwall.

We work principally in kiln dried hardwood from West Africa that sustainably sourced and FSC (Forestry Stewardship Council) certified. After machining and assembly, the frames receive one base coat and two top coats of a microporous stain or paint.

CASEMENT WINDOWS

Attached to their frame with hinges, casement windows are one of the most popular and versatile styles we manufacture, suiting both traditional and contemporary homes. Available in timber, uPVC and aluminium in any colour you choose.

VERTICAL SLIDER/SASH WINDOWS

Otherwise known as Victorian sliders or sashes, these are one of the most traditional styles of window, however when combined with modern materials, you get all the benefits of traditional styling without the maintenance.

Available in uPVC or timber in any colour.

FLUSH SASH

Our flush sash system that we manufacture here in our factory is a modern window and door profile designed to combine a traditional timber look with high-performance uPVC construction.

A flush sash window is one where the opening part (the sash) sits perfectly flat (flush) with the outer frame when closed - unlike standard uPVC windows where the sash protrudes.

Our profile takes that concept further with a “double flush” design; flush on the inside and outside. The Double-rebated frame means there is no compromise on weather sealing and strength.

BAY & BOW WINDOWS

Bay and bow windows are designed to create space by projecting beyond the exterior wall of a building, providing a wider view of the garden or street. They typically combine four or more casement windows, which join together to form an arch.

FRENCH DOORS

The understated elegance of French Doors will bring light into your home and create a flow between your house and garden. With multipoint locking systems and thermally efficient double glazing, there is no compromise on security or energy efficiency. Available in timber, uPVC and aluminium in any colour.

RESIDENTIAL DOORS

Update the look of your home with our stunning yet secure residential doors. Available in a wide choice of designs and any colour you choose, all our doors come with high security locking mechanisms. Maintain your privacy with an array of patterned glass, choose the colour of your hardware and even specify the threshold.

STABLE DOORS

Stable doors can make a beautiful addition to a traditional property, enabling fresh air to circulate whilst restricting access in and out of the door, often useful for pets and small children.

BI-FOLD DOORS

Increasingly popular in recent years, the concertina design of bi-fold doors creates a large aperture that acts like a picture frame. Bi-folds allow you to extend your living space in summer by creating a seamless indoor-outdoor space, whilst maintaining all the benefits of thermal efficiency in winter.

Our bi-fold doors are offered in a range of sizes and configurations with up to a maximum of seven leaves, making a very flexible solution for openings of all sizes.

SLIDING PATIO DOORS

Sliding patio doors offer another option to let in the light and beautifully frame your garden or view. We offer from two to six part configurations with all the security and weatherproofing of traditional doors. Our patio doors are available in aluminium and uPVC in any colour you choose.

BESPOKE DESIGNS

Replacing your doors and windows can instantly update the feel of your home whilst improving energy performance.

From our factory and showroom in Cornwall, we can guide you through the design process to find the products that best complement your property - whether you have a traditional building or a more contemporary home.

MATERIALS

We manufacture our uPVC windows and doors and supply hardwood timber and aluminium. All of our products can be supplied in your choice of colour.

10 YEAR GUARANTEE

Our 10 year insurance backed guarantee and genuine after sales service means, should anything go wrong with your installation, our service engineer is on hand to help resolve any issues.

TECHNICAL / PRODUCT SPEC

Hardware (Locks & Handles)

We take security very seriously, which is why our standard profile is fitted with high security locking mechanisms in stainless steel. Our door mechanisms incorporate three counter opposed hooks, four roller cams for security and ease of use and two shootbolts which secure the top and bottom of the door as well as a long reach deadbolt and latch. This is without doubt one of the most secure systems on the market.

We use fully adjustable, high-quality hinges with a minimum of three hinges per door. Our hinges not only facilitate a high degree of adjustment but are designed to take the high loads that uPVC doors place on the hinges.

Internally Beaded

For superior security and peace of mind.

Reinforcing

Our windows are fully reinforced to the extent that can be technically achieved. Our frames are made to receive standard 28mm energy efficient double glazed sealed units, but if triple glazing is required, this can be accommodated.

All our units are manufactured to conform with British Standards and, where toughened glass is required, they also carry the BS 'kitemark'

Paint any Colour

We can paint in any colour which is a great way to make your product unique and add character to your home. If you've chosen a painted finish, our expert paint technician will spray and lacquer your components in our in-house spray booth

We are conscious of the maritime climate here in Cornwall, so wherever possible we use stainless steel for all our fixings, hinges, locks and furniture on all of our products.

A GREENER HOME

Old doors, windows and conservatories are the cause of a significant proportion of wasted energy in homes across the UK. People are becoming increasingly conscious of not only the costs of wasting energy, but also the impact on the environment.

Energy efficient doors, windows and conservatories are an investment that will save you in the long run.

WHAT ARE THE BENEFITS?

- Reduced energy consumption and therefore lower bills.
- A smaller carbon footprint.
- A more comfortable home (fewer draughts and cold spots).
- Peace and quiet.
- Reduced condensation.

Nearly everything is recycled when we remove your old windows & doors. We recycle all uPVC, aluminium, timber and glass. All of our timber is FSC certified.
